Achilles Medical
الوتر الطبية

One Of The Most Common Diseases, Back Pain, Where As Many As Nearly 90% Of People Of These Pains. That Was Attributed To The Disc Or Cramps Or Pain As A Result Of Accidents. Since Conventional Treatment Did Not Give The Desired Results In Some Cases, We Have To Reach To The Latest Technology In The Treatment Of Pain In

Achilles Medical Center

The First Center in Jordan Using Laser Treatment Mechanism

- Laser Therapy a High-Density
- Low-intensity Laser Treatment
- Laser Treatment Of Deep Tissue
- Treatment Ultrasonic
- Laser Treatment of Neural Tissue and Connective Tissue

The Principle Of Laser Action :

The Light absorption inside the cell, Where light energy is converted into energy Biochemical Is consumed within the cell to restore natural function.

Features Laser Treatment Technology:

- Non-surgical
- High effectiveness
- Non-toxic
- The rate of improvement and healing in all cases from 85% - 90 % .
- Technology of laser treatment radically cure the problem and not just the symptoms of the disease only calming.
- in this technique there is no any negative side effects, the laser beams do not affect healthy cells Originally operated normally.

Physiological Effects For Laser :

- Relieve pain, swelling and inflammation lymphatic.
- Accelerate rebuilding skin tissue, Thereby accelerating healing of wounds and scars, Burns, Ulcers.
- Accelerate and stimulate Biosynthesis and the healing of infected tissue Which helps to relieve pain and cure the problem.
- Improve MySQL functions such as: secretion of growth factors, cell multiplication, protein production, Production DNA and Cytokinin.
- Stimulate and activate the immune response.
- Improve the work of the Lymphatic System.
- Improve circulation and Blood Nutrition of affected area.
